

The BlackRock Floating Rate Income Trust, BGT, is a perpetual closed-end taxable bond fund. BGT commenced operations in August 2004 with the investment objective of proving a high level of current income. As a secondary objective, BGT also seeks the preservation of capital to the extent consistent with its primary objective of high current income. The Trust pursues its investment objectives by investing in a global portfolio of primarily floating and variable rate securities. Under normal market conditions, BGT will invest at least 80% of its assets in floating and variable rate instruments of U.S. and non-U.S. issuers, including a substantial portion of its assets in senior, secured loans made to corporate and other business entities.

GROWTH OF A HYPOTHETICAL \$10,000

The chart illustrates the growth of a hypothetical \$10,000 investment in the fund's common shares based on market price beginning on the date noted with all distributions reinvested. Ending value as of the date at the top of this document. Performance does not reflect sales charges or fees that may be incurred. **Past performance is no guarantee of future results.**

HISTORICAL PREMIUM/DISCOUNT

Premium-discount graph illustrates the amount by which the market price trades above or below net asset value.

PERFORMANCE

	1 Year	3 Year	5 Year	10 Year	Incept.
Net Asset Value	9.11%	7.60%	6.39%	6.05%	5.79%
Market Price	16.31%	6.98%	8.85%	7.40%	5.67%

Returns for less than one year are not annualized. **Performance data quoted represents past performance of common shares and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares may be worth more or less than the original cost. The fund's market price and net asset value will fluctuate with market conditions. All return data assumes reinvestment of all distributions. Current performance may be lower or higher than the performance data quoted. For more information, please refer to www.blackrock.com.** Returns are shown net of advisory fees paid by the fund and net of the fund's operating fees and expenses. Investors who purchase shares of the fund through an investment adviser or other financial professional may separately pay a fee to that service provider. **Past performance is not indicative of future results.** If a Fund estimates that it has distributed more than its income and net realized capital gains in the current fiscal year, a portion of its distribution may be a return of capital. A return of capital may occur, for example, when some or all of a shareholder's investment is paid back to the shareholder. A return of capital distribution does not necessarily reflect a Fund's investment performance and should not be confused with 'yield' or 'income'. When distributions exceed total return performance, the difference will reduce the Fund's net asset value per share. Although the character of income will not be determined until the end of the fund's fiscal year, please refer to the 'Closed-End Fund Resources' section of the BlackRock website for Section 19 notices that provide estimated amounts and sources of the fund's distributions, which should not be relied upon for tax reporting purposes. A Form 1099-DIV for the calendar year will be sent to shareholders to illustrate how the Fund's distributions should be reported for federal income tax purposes.

KEY FACTS

Size of Fund (Millions)	\$320.3M
Managed Assets	\$382.3M
Share Class Launch Date	08/30/2004
Asset Class	Fixed Income
Morningstar Category	Bank Loan
Lipper Classification	Loan Participation Funds
NAV Per Share	12.57
Share Price	12.86
Premium/Discount	2.31%
Number of Holdings	521
Dividend Frequency	Monthly
Distribution Rate**	11.22%

Managed Assets means the total assets of the Trust (including any assets attributable to leverage) minus the sum of accrued liabilities (other than debt representing financial leverage). *Distribution Rate is calculated by annualizing the most recent distribution and dividing by the fund's market price from the as-of-date.*

07/15/24	0.1203

Past distributions are not indicative of future distributions. ****Distributions may include a return of capital. Please refer to the "Tax Information" section of the BlackRock website for Section 19 notices that provide estimated amounts and sources of the fund's distributions, which should not be relied upon for tax reporting purposes.**

PERFORMANCE

1 Year	3 Year	5 Year	10 Year	Incept.
--------	--------	--------	---------	---------

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future performance and should not be the sole factor of consideration when selecting a product or strategy. Share Class and Benchmark performance displayed in USD, hedged share class benchmark performance is displayed in USD. Performance is shown on a Net Asset Value (NAV) basis, with gross income reinvested where applicable. The return of your investment may increase or decrease as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation. **Source:** BlackRock

You should consider the investment objectives, risks, charges and expenses of the fund carefully before investing. The prospectus and, if available, the summary prospectus contain this and other information about the fund and are available, along with information on other BlackRock funds, by calling 800-882-0052 or from your financial professional. The prospectus should be read carefully before investing. Investing involves risks including possible loss of principal. All information and data, including portfolio holdings and performance characteristics, is as of the date at the top of this document, unless otherwise noted, and is subject to change. Note that closed-end funds often trade at a discount to NAV but may trade at a premium.

The two main risks related to fixed income investing are interest rate risk and credit risk. Typically, when interest rates rise, there is a corresponding decline in the market value of bonds. Credit risk refers to the possibility that the issuer of the bond will not be able to make principal and interest payments. The leverage strategy of the Trust assumes a positive slope to the yield curve (short-term interest rates lower than long-term rates). Otherwise, the benefits of leverage will be reduced or eliminated completely. Investments in non-investment grade securities (high-yield bonds or junk bonds) may be subject to greater market fluctuations and risk of default or loss of income and principal than securities in higher rating categories. The Trust may utilize leveraging to seek to enhance the yield and net asset value of its common stock, as described in the Trust's prospectus. These objectives will not necessarily be achieved in all interest rate environments. The use of leverage involves risk, including the potential for higher volatility and greater declines of the Trust's net asset value, fluctuations of dividends and other distributions paid by the Trust and the market price of the Trust's common stock, among others. BlackRock receives credit quality ratings on underlying securities of the fund from the three major reporting agencies - S&P, Moody's and Fitch. The credit quality breakdown is provided by BlackRock by taking the median rating of the three agencies when all three agencies rate a security. BlackRock will use the lower of the two ratings if only two agencies rate a security, and BlackRock will use one rating if that is all that is provided. Securities that are unrated by all three agencies are reflected as such in the breakdown. Below investment-grade is represented by a rating of BB and Below. BlackRock converts all ratings to the equivalent S&P major rating category for purposes of the category shown. Ratings and portfolio credit quality may change over time. Unrated securities do not necessarily indicate low quality. The fund itself has not been rated by an independent rating agency. Negative weightings may result from specific circumstances (including timing differences between trade and settle dates of securities purchased by the funds) and/or the use of certain financial instruments, including derivatives, which may be used to gain or reduce market exposure and/or risk management. Certain transactions the funds may utilize may give rise to a form of leverage through either (a) additional market exposure or (b) borrowing capital in an attempt to increase investment return. The use of such transactions includes certain leverage-related risks, including potential for higher volatility, greater decline of the fund's net asset value and fluctuations of dividends and distributions paid by the fund. General market and credit risks. Debt instruments are subject to credit and interest rate risks. Credit risk refers to the likelihood that an obligor will default in the payment of principal or interest on an instrument. Financial strength and solvency of an obligor are the primary factors influencing credit risk. In addition, lack or inadequacy of collateral or credit enhancement for a debt instrument may affect its credit risk. Credit risk may change over the life of an instrument and debt instrument that are rated by rating agencies are often reviewed and may be subject to downgrade. Interest rate risk refers to the risks associated with market changes in interest rates. Interest rate changes may affect the value of a debt instrument indirectly (especially in the case of fixed rate obligations or directly (especially in the case of instrument whose rates are adjustable). In general, rising interest rates will negatively impact the process of a fixed rate debt instrument and falling interest rates will have a positive effect on price. Adjustable rate instruments also react to interest rate changes in a similar manner although generally to a lesser degree (depending, however, on the characteristics of the reset terms, including the index chosen, frequency of reset and reset caps or floors, among other factors).

BLACKROCK®

GLOSSARY

Distribution Rate: Distribution Rate is calculated by dividing the last distribution per share (annualized) by market price.

Total Leverage: The amount of borrowed funds used to purchase assets in order to enhance returns.

Percent Leveraged: Percent Leveraged represents the amount of preferred stock or tender option bonds issued in relation to total Managed Assets.

Modified Duration: A measure of the responsiveness of a bond's or portfolio's price to changes in interest rates. Effective Duration adjusts for changes in projected cash flows as a result of interest rate changes. This metric considers the likelihood that bonds will be called or prepaid before the scheduled maturity date.

Yield to Maturity: The discount rate that equates the present value of a bond's cash flows with its market price (including accrued interest). The Fund average YTM is the weighted average of the fund's individual bond holding YTM's based on NAV. The measure does not include fees and expenses. For callable bonds, YTM is yield-to-worst

WAL to Worst: The weighted average time to receipt of principal, adjusting for embedding optionality.

Yield to Worst: The average rate of return of the portfolio at current market prices, adjusting for optionality.
